Type: ROUTINE INSPECTION
Date: Jan-21-2016

2.132 (d)

PROCUREMENT OF DOGS, CATS, AND OTHER ANIMALS; DEALERS.

This dealer has knowingly purchased from at least three individuals that require to be licensed under the Animal Welfare Act. On 11/19/2015, APHIS officials collected all records from this facility to perform a records review and inspection. During a review of the exemption certificates provided by the Licensee, it is apparent that 3 individuals falsely signed exemption certificates. Based upon the records, these individuals have more than 4 breeding female on their premise and require a current, valid and unsuspended license to sell puppies to the Licensee.

The first individual signed an exemption form 8 times from 3/9/2015-11/9/2015. The individual sold a total number of 10 litters to the Licensee during this time; 7 of these litters all born within a 6 month period. The litter breeds and date of birth are as follows: 2-husky puppies whelped 1/12, 2-husky puppies whelped 1/13, 9-husky puppies whelped 4/18, 4-1/19, 6-lab/australian shepherd cross puppies whelped 4/18, 5-lab/german shepherd cross puppies whelped 4/18, 4-husky puppies whelped 7/18, 6-husky puppies whelped 7/27, 1-husky puppy whelped on 7/27 (this puppy does not have an assigned number on the certificate that correlates with the previous litter with the same whelp date indicating it is from a separate litter), 6-husky puppies whelped 9/14 and 10 Beagle/Bulldog cross puppies with an unrecorded/illegible birthdate)

The second individual signed an exemption form 5 times from 2/23/2015-10/12/2015. The individual sold a total of 7 litters to the Licensee during this time; all of the litters sold were born within an 8 month period. The litter breeds and date of birth are as follows: 5-husky puppies whelped 12/28/2014, 2-beagle/bulldog cross puppies whelped 12/28/2014, 3-husky puppies whelped 3/29/2015, 4-husky puppies whelped 5/9, 3-husky/beagle cross puppies whelped on 5/9, 4-husky puppies whelped 6/3 and 6-husky puppies whelped 8/8

The third individual signed an exemption form 6 times from 3/2/2015- an unknown date in September of 2015. The sold date is missing on the exemption form for this sale. The individual sold a total of 7 litters to the Licensee during this time; all of these litters sold were born within a 6 month period. The litter breeds and date of birth are as follows: 5-yorkie/bichon cross puppies whelped 1/3, 4-yorkie/bichon cross puppies whelped 1/13, 1-yorkie/bichon cross puppies whelped 1/13 (this puppy does not have an assigned number on the certificate that correlates with the previous litter with the same whelp date)

indicating it is from a separate litter), 4-yorkie/bichon cross puppies whelped 3/2, 2-yorkie bichon cross puppies whelped 5/18, 7-yorkie/bichon cross puppies whelped 7/1 and 3-lab puppies whelped 7/12).

Through the Licensee's own record keeping, APHIS officials were able to establish that more litters were purchased from each individual than 4 females would be able to birth during these periods. Based upon the puppies dates of birth, amount of litters birthed within a short periods of time and normal gestation periods for dogs, it is obvious that all three of these facilities have more than 4 breeding females on their premise. The records obtained from the Licensee clearly establishes that they knowingly acquired puppies from unlicensed sources that clearly require a USDA license but do not hold a current, valid, and unsuspended license, which makes it impossible for APHIS to regulate those animals and undermines a working relationship between the licensee and APHIS officials. This working relationship is essential in ensuring the wellbeing of the animals under the Animal Welfare Act.

When APHIS Officials informed the Licensee of their findings, the Licensee stated that they had a changeover of office personnel and that the employee that left was very good at keeping track of the amount of litters purchased from each unlicensed breeder. The Licensee stated that they will be configuring their system to allow them to more accurately identify how many litters they have purchased from unlicensed sources and be able to more closely monitor the time frame for which they are purchasing them. The Licensee must not acquire puppies from any unlicensed sources that require a current, valid and unsuspended license unless they are truly exempt from USDA regulations and oversight. Correct from this time forward.

This was a records review only.

All records for review were collected on 11/19/2015.

Records were reviewed between 11/19/2015-1/21/2016.

Exit interview conducted with facility representative and Animal Care Inspector Shannon Sebera on 1/21/2016.

Type: ROUTINE INSPECTION
Date: Mar-16-2016

3.6 (a) (2) (ix)

PRIMARY ENCLOSURES.

There were 3 whelping enclosures that had an excessive amount of chew damage at the entrance to the whelping box. In addition, 8 out of 12 enclosures in the building at the bottom of the hill had an excessive amount of chew damage on the inside surrounding portion of the doggy door. In each of these areas, there was a brown to black matter adhered to these areas. These areas are no longer able to be cleaned and sanitized. The Licensee must ensure that all surfaces that come in contact with the dogs are able to be cleaned and sanitized or have been removed when they become worn or soiled.

Correct By: 3/30/2016

3.6 (c) (1) (iii)

PRIMARY ENCLOSURES.

At the time of inspection there were two juvenile Airedale puppies (pup#15-692 and 15-692A DOB 11/19/2014) housed in an enclosure that did not allow them to have 6" above their heads while they were sitting or standing fully erect. All enclosure must be constructed in a manner that allows each animal to have normal mannerisms and posture. This includes allowing each animal to have at least 6" above its head while in its primary enclosure. The Licensee must ensure that all enclosures are large enough for the size of the animal that it will contain. The Licensee must ensure that all dogs are placed in primary enclosures that allow the animal to have 6" above its head while sitting and standing fully erect.

Correct By: 3/30/2016

2.40 (a) (1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

During today's inspection, a tube of Dia Gel was found in a medicinal cabinet located in the whelping building. The Licensee stated that the Veterinarian had given him the tube for an animal that had loose stool. However, the bottle is labeled for the use in equine with no additional guidance on the tube from the veterinarian. The Licensee does not currently have any additional documentation to reflect the appropriate use of this medication on Dogs. Improper use of medications can cause the medication to be ineffective or could potentially cause death to the animal if given an improper over dose. Although this tube of medication was disposed of during the inspection, the Licensee must ensure that he has all appropriate documentation from a veterinarian for the use of all medications that are not labeled for the specific use on dogs. In addition, he must have guidance on proper administration; dosage, frequency, routine of administration, etc.

Date: Jan-14-2016

2.40 (a) (1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

During the inspection the licensee was **unable to locate the program of veterinary care**. The written program was previously inspected by APHIS officials and evidence that the veterinarian has recently provided care for the animals was produced by the licensee. Maintaining a written program of veterinary care ensures that the licensee is able to follow the veterinarian's instructions on providing adequate care for the animals. A written program of veterinary care and regularly scheduled visits to the premises of the dealer or exhibitor must be maintained by the licensee and made available for APHIS officials during inspections.

Correct by contacting the attending veterinarian and implementing the written program of veterinary care by close of business on 1/18/2016.

The inspection and exit interview were conducted with the Licensee and Veterinary Medical Officer, Michael Neafsey.

2.40 (b) (1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***The following drugs were found expired in the kennel during this inspection:

1. One bottle of liquid Albion expired 11-2014
2. One bottle of liquid Panacur expired 07-2015
3. One bottle of liquid Pyrantel expired 03-2015
4. One tube of triple antibiotic ophthalmic ointment expired 06-2014

The use of expired medications can be dangerous or ineffective. The licensee must ensure that only drugs in date are used on animals in the kennel. Correct this by disposing of these expired medicines and using only drugs in date.

Correct from this date forward

2.40 (b) (2)

DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** A five year old female Shih Tzu, USDA tag 65, was noted to have hair loss along the top of the back in an area of approximately 5 inches x 3 inches. She also has hair loss around her collar and on the back of her neck in an area of approximately 2 inches x 2 inches. Both of the regions with hair loss had significant crusting and scabbing and appeared irritated. The upper left canine also had the baby tooth beside it, still intact. Both the adult and baby canines had a moderate amount of hard tan material on and between the teeth. The left eye was red and appeared irritated. The surface of the eye has a white spot on the center that took up approximately 30% of the surface. The hair around the eyes had a small amount of clear and tan discharge and crusting. No documentation or treatment plans were available at the time of the inspection in regards to the diagnosis and treatment of these issues.

The adult female, USDA tag 65, also had long toe-nails on all four feet. The nails did not appear to be causing immediate problems for the animal. Proper grooming practices should be followed to prevent the animal from unnecessary injury due to long toes. Proper grooming practices for this animal is needed to ensure that the animal remains in good health. The program of veterinary care provides instructions as to the proper care of the animals and must be followed to ensure that adequate care is given to the animals.

in a timely manner.

The issues noted in the female Shih Tzu, USDA tag 65 may cause unnecessary pain and distress to the animal. Daily observations of this animal are also needed to monitor the progression of any treatments given by the attending veterinarian. The licensee shall use appropriate methods to prevent, control, diagnose and treat diseases and injuries.

Correct by having a licensed veterinarian assess this animal by end of business on October 2, 2015.

2.75 (a) (1)

RECORDS: DEALERS AND EXHIBITORS.

***Six Form 7006 Records of Disposition are missing information. The date of disposition in Block #1 and the date received by the buyer in block #12 are blank. Failure to provide complete and accurate records makes it impossible to determine if these sales are compliant with required standards. Lack of a date of disposition makes it also impossible to determine if minimum age standards are in compliance. The licensee must ensure complete and accurate records are maintained for review during the inspection process.

Correct from this date forward

3.1 (c) (1) (i)

HOUSING FACILITIES, GENERAL.

*** At least 6 enclosure doors are rusty and require repair or replacement. These doors are significantly rusty which prevents them from being properly sanitized. The licensee must ensure all surfaces in contact with the dogs are structurally sound and can be cleaned and sanitized. Failure to do so may expose the dogs to disease hazards. Correct this by repairing or replacing these doors.

Correct by: 14 October 2015

3.11 (a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

***All of the wash downs for this facility have varying degrees of fecal/urine build-up and staining. The outside wash down on the adult side of the kennel are especially stained and in need of cleaning. This build-up and staining can contribute to odors in the kennel and is a potential area to harbor disease hazards. The licensee must clean, sanitize, and maintain these areas on a more frequent basis to minimize disease risks and odors in the kennel.

Type: ROUTINE INSPECTION
Date: Oct-01-2015

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

An adult male Yorkie USDA tag number 052 was found during inspection to have matted and grimy hair. This male had not be adequately groomed to promote the health and wellbeing of the animal.

An adult female Bichon, USDA tag number 188, was found to have approximately three inches of hair missing from the base of the tail. There was a superficial lick lesion the size of a small pencil eraser on the tail near the center of the hair loss. The licensee's son had indicated that he had noticed the missing hair but hadn't treated the animal yet. The current program of veterinary care provides instructions to the licensee for treatment alopecia/hair loss and hotspots/skin problems.

Proper grooming practices for these animals is needed to ensure that the animal remains in good health. The program of veterinary care provides instructions as to the proper care of the animals and must be followed to ensure that adequate care is given to the animals in a timely manner. The licensee shall use appropriate methods to prevent, control, diagnose and treat diseases and injuries.

Correct by treating the Bichon according to the instructions in the program of veterinary care and by grooming the Yorkie male by October 3, 2015.

The exit interview was conducted with the licensee, Randy Coleman ACI and Michael Neafsey, VMO.

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***There is a male Sharpei (#45) in need of veterinary care - it appears to have a swollen digit on the right front foot. On closer examination, the first digit or dewclaw has a toenail that is overgrown, curling around back into the soft tissues of the toe. This is a painful condition and can lead to infection of the affected toe. This dog must be examined by a licensed veterinarian and treated accordingly.

Correct by: 5 October 2015

2.40 (b) (3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***There is one dog in need of veterinary care that the licensee did not observe and therefore did not communicate to the veterinarian. Daily observation of animals is important to assess the need for treatments or other interventions to maintain their health and well-being. Correct by observing daily all the animals, and communicating timely and accurate information to the attending veterinarian regarding the health, behavior, and well-being of the animals.

Correct from this time forward.

The inspection and exit interview were conducted with the licensee by the undersigned VMO.

Date: Nov-18-2015

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** A male cream and white bulldog (with no ID) was found with red masses of tissue on inner corners of both eyes. These masses appear to be a condition commonly known as "cherry eye". There was no written documentation that the facility had addressed this problem or that the attending veterinarian was notified of this problem. This dog requires veterinary attention. Failure to provide veterinary care to animals in the kennel can result in pain and suffering in the dogs. Correct this by having this dog examined by a licensed veterinarian and following all recommended treatments. The licensee must maintain documentation of treatments and exam for future inspection by APHIS officials.

Correct by: November 23, 2015

2.50 (a) (1)

TIME AND METHOD OF IDENTIFICATION.

*** A male cream and white bulldog was found with no official identification. A cage card on the enclosure housing this dog states "born 5/5/15 bulldog". This date of birth means this dog is at least 6 months of age. Official ID is required for this dog. Failure to provide identification for all dogs make animal tracking difficult, impedes the inspection process, and is especially important in the event of a disease outbreak. Correct this by properly identifying this and all dogs in the kennel.

Correct by: November 23, 2015

***Inspection and exit interview conducted with the licensee's wife

MINIMUM AGE REQUIREMENTS.

The Licensee maintained an APHIS FORM 7006 with a disposition date of 6/6/2015 with a total of 5 Yorkie puppies (15-317, 15-318, 15-319, 15-320, 15-321). The date of birth listed on the APHIS FORM 7006 for these puppies is 5/9/2015. The Licensee maintained an APHIS FORM 7006 with a disposition date of 6/6/2015 with a total of 6 Lhaso puppies (15-326, 15-327, 15-328, 15-329, 15-330, 15-331). The date of birth listed on the APHIS FORM 7006 for these puppies is 5/9/2015. This form also had 6 Bichon puppies (15-336, 15-337, 15-338, 15-339, 15-340, 15-341). The date of birth listed on the APHIS FORM 7006 for these puppies is 5/9/2015.

The Licensee stated that the disposition date was written down wrong when the puppies were picked up. However; the inspector was able to retrieve a copy of the buyers APHIS FORM 7006. Both forms maintained the same information and confirmed that all 17 puppies were transported from the facility in commerce to the buyer under the required age and before they were 8 weeks of age. Puppies are subjected to several mental and developmental issues when they are removed from their mother to early. No dog or shall be delivered by any person to any carrier or intermediate handler for transportation, in commerce, or shall be transported in commerce by any person, except to a registered research facility, unless such dog or cat is at least eight (8) weeks of age and has been weaned.

Inspection and Exit conducted with Licensee and Animal Care Inspector Shannon Sebera.

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Dog with microchip #0A02162273, white bichon female, was noticed shaking her head. Upon further examination, both ears have a heavy accumulation of dark brown matter. In addition, this dog has an open sore on her right ear.

Dog with microchip #0A02154170, white bichon female, was noticed shaking her head. Upon further examination, her right ear has a heavy accumulation of dark brown matter. In addition, this dog has open sore on both of her ears.

Having ear issues can be painful and irritating to the dog. This cause the dog to scratch, bite or rub the ears and may result in wounds/sores on the ears. Licensee must have methods to prevent, control, diagnose and treat all ear issues. These two dogs must be seen by a licensed veterinarian. Documentation of the examination, diagnoses and treatment must maintained by the licensee and made available for inspection by APHIS officials.

Correct by: 7/14/2014

2.40 (b) (3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Two dogs were noticed to have ear issues at today's inspection. In addition, several other dogs were noticed to be shaking their heads but had no obvious signs of ear issues. Licensee's wife stated that these issues had not been noticed prior to today's inspection. Issues that are left unnoticed and untreated can cause the animal's unnecessary pain and discomfort. Licensee must have a routine for daily observation and communicate all health issues to the attending veterinarian within a timely manner.

Correct By: 7/11/2014

Inspection and Exit conducted with Licensee's Wife.

Type: ROUTINE INSPECTION
Date: Sep-09-2015

3.6 (a) (2) (x)

PRIMARY ENCLOSURES.

It was noted on inspection that several puppies' feet in one enclosure were passing through the holes in the wire floor. One puppy was seen with multiple feet through the floor simultaneously, so that the puppy's weight was only supported by its belly. This "dangling" position may be distressful for a puppy, in addition to posing a risk of injury if the feet were to get stuck. Floors must be constructed in a manner that protect dogs' feet from injury, and that do not allow the dogs' feet to pass through any openings. Correct by ensuring that floors of primary enclosures do not allow dogs' feet to pass through and are constructed to protect them from injury.

Correct by: 12 September 2015

This item was corrected during the inspection by the wife of licensee placing a solid panel on the floor so the puppies' feet did not pass through the holes in the wire.

The inspection and exit interview were conducted with the wife of the licensee by the undersigned VMO.

Type: ROUTINE INSPECTION
Date: Jul-21-2015

2.40 (a) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** Black and White Shih-Tzu female #106 was examined by the attending veterinarian in November 2014 for an annual physical exam. At that time the AV documented a Grade II dental disease in this dog. The current Program of Veterinary Care (PVC) states that dogs with a Grade II should be documented by the facility and hand scaled by the facility if the dogs are not pregnant. Additionally, dogs with Grade III or Grade IV dental disease require cleaning by the veterinarian if not pregnant. Today, this dog's dental disease has progressed and the dog is currently pregnant. The licensee has not documented anything concerning this dog including whether the dog was hand scaled or pregnant when identified as a Grade II in November 2014. This does not give the AV adequate authority to ensure the appropriate veterinary care to all dogs in the kennel. The licensee must ensure the PVC is followed as written or request changes be made to the PVC so the procedures in the facility match what the PVC documents. This dog will require veterinary attention after she whelps and the licensee must document this need as stated in the PVC.

Correct by: 22 July 2015 for this dog and from this day forward for all future medical problems in the dogs

2.75 (a) (2)

RECORDS: DEALERS AND EXHIBITORS.

*** This facility is currently using cage cards for both ID and records for puppies. The cage cards do include all of the required information to satisfy the recordkeeping requirement including a description of the animals, the date removed or sold, and the breed type. Failure to maintain complete and accurate records impedes the inspection process and makes animal tracking difficult to impossible. Animal tracking is especially important in the event of a disease outbreak. Correct this by ensuring all records are complete, including cage cards if they are used as records for puppies

Correct by: 29 July 2015 for animals on hand and from this date forward for all future puppies

Inspection Report

3.6 (a) (2) (x)

PRIMARY ENCLOSURES.

*** The feet for three adult Pomeranian dogs on the right side of the outdoor housing were found falling through the openings in the flooring being used. Also, the feet of one litter of 6 puppies in the whelping area of the 2nd kennel were found falling through the coated metal wire flooring. This is a hazard to the dogs as their legs may be injured or trapped in the flooring. The licensee must ensure that if non-solid flooring is used, it must not allow the feet to fall through the floors.

Correct by: 22 July 2015

3.8 (a)

EXERCISE FOR DOGS.

*** This facility's exercise program states that all singly housed dogs will have twice the minimum space requirement for adult dogs. Male Shih-Tzu #200 is housed alone and measures approximately 17 inches in length. This dog requires 7.35 square feet of floor space to satisfy the exercise requirement. This dog is housed in a primary enclosure measuring 25 inches by 24 inches (4.17 square feet). This dog does not have adequate space. Failure to provide adequate space can be stressful to the dogs and can result in stereotypical behaviors. Correct this by providing this dog adequate space.

Correct by: 22 July 2015

***Inspection and exit interview conducted with the licensee, Liz Bartels, ACI, and Randy Coleman, ACI.

3.2 (d)

INDOOR HOUSING FACILITIES.

Several areas along the walls of the main building as well as the ceiling are composed of exposed wood and other materials not impervious to moisture. These areas are able to absorb moisture and create a potential to harbor pathogens. The floors, walls, ceilings and other areas in contact with the animals must be impervious to moisture.

Correct by 16 December 2015.

3.6 (a) (2) (ix)

PRIMARY ENCLOSURES.

The floors, walls and doors on the outside portion of the primary enclosures were moderately worn. The primary enclosures in this area are constructed of primarily of coated wire. The wire coating has been worn or chewed off over portions of the floors, walls and doors. In the majority of these areas the exposed wire is rusted. These areas of the kennel are no longer in good repair. The areas where the coating is damaged provide crevices that organic material can become entrapped preventing adequate cleaning and sanitization. Additionally, the rust which has formed over the exposed wires also prevents them from being readily cleaned and sanitized. Correct by repairing or replacing these damaged areas. All surfaces in contact with the dogs must be readily cleaned and sanitized in accordance with Sec. 3.11 (b) of this subpart, or be replaceable when worn or soiled.

Correct by: 16 December 2015.

The inspection and exit interview were conducted with the Licensee and Veterinary Medical Officer, Michael Neafsey.

2.40 (b) (2)

REPEAT DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

DIRECT

***Female Yorkie #14 has excessive tartar on all teeth on the upper arcade on both sides. The 4th upper premolars on both sides are completely covered in tartar. The gums above the upper molars and upper canine teeth are also bright red in color. These signs are consistent with dental disease that can be painful and may lead to the dog being unwilling to eat. Additionally, dental disease has been linked to other health problems including kidney and heart disease.

***Male Yorkie #33 has tartar build-up on all of its teeth. Especially, the 4th upper premolar on the left side and both lower canines are completely covered with tartar. It is missing several teeth including lower incisors. There is no record of treatment on hand for this animal. This dog is also drooling significantly from its mouth. These signs are consistent with significant dental disease and pain.

Both of these dogs are in need of veterinary care. The licensee must have these dogs examined by a veterinarian by 2 March 2015. Failure to provide adequate veterinary care can lead to pain and suffering in the animals and does not ensure appropriate care to animals in the facility.

Correct this by contacting a licensed veterinarian and to have these animals examined. Licensee must follow all recommended treatment and maintain documentation of treatment for future review by APHIS officials.

Even though this is a repeat NCI, the licensee must have these animals examined by 2 March 2015.

THIS IS A REPEAT NON-COMPLIANT ITEM THAT REMAINS UNCORRECTED

2.40 (b) (3)

REPEAT DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

DIRECT

*** Two dogs were found in need of veterinary care during this inspection. The licensee was unaware of

Inspection Report

the condition of both of these dogs and no documentation of treatment or care was on hand concerning these dogs. The licensee must ensure that all animals are observed daily to ensure that medical problems can be discovered and appropriate care given in a reasonable amount of time. Failure to observe animals daily and give needed care can result in animal suffering. This continues to be a problem at this facility with dogs found in need of care without the licensee's knowledge of the condition of the animals on previous inspections dated 04 March 2014 and 01 July 2014.

THIS IS A REPEAT NON-COMPLIANT ITEM THAT REMAINS UNCORRECTED

3.1 (c) (3)

HOUSING FACILITIES, GENERAL.

*** Most of the inside enclosures in the sheltered facility have surfaces in contact with the dogs that are dirty and require cleaning. There are fecal smears, grime build-up and dirt in all of the corners of the enclosures and on enclosure walls. These surfaces must be spot cleaned daily as needed to ensure that the living space for the dogs remains clean and disease hazards are kept to a minimum. Failure to clean and maintain these enclosures exposes the dogs to unnecessary disease hazards and does not satisfy accepted cleanliness standards. Correct this by cleaning and maintaining all primary enclosures in a sanitary condition.

Correct by: 01 March 2015

3.4 (b)

REPEAT DIRECT NCI

OUTDOOR HOUSING FACILITIES.

*** Six adult dogs are being housed outdoors with shelters that have no bedding. Although the dogs are pair housed, there is no bedding in the shelter boxes. The outside temperature during this inspection was 16 degrees F. Temperatures tonight are expected to drop below zero with daytime temperatures over the next few days in the mid-20's to low 30's. The licensee stated that he provides the dogs with sawdust as bedding. Although sawdust is acceptable as bedding when required for temperatures dropping below 50 degrees F, it is not acceptable when additional bedding is needed when temperatures drop below 35 degrees F. Straw, hay, or other bedding is required to allow these dogs to nest and maintain body heat. Sawdust will not provide adequate insulation to the dogs. Failure to provide adequate bedding exposes the animals to unnecessary temperature extremes and can result in cold stress or injury to the dogs. Correct this by providing these dogs with adequate bedding.

***The licensee was advised during this inspection on 27 February 2015 to provide these dogs adequate bedding.
THIS IS A REPEAT NON-COMPLIANT ITEM THAT REMAINS UNCORRECTED

4251 COUNTY ROAD 114

Type: ROUTINE INSPECTION

SUGARCREEK, OH 44681

Date: 04 March 2014

2.40 (b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS)

** Male Yorkie #18 was found with extensive build up of brown material on its teeth. This dog has few teeth remaining in its mouth and those are completely covered with brown material. Remaining teeth that are covered with brown material include the upper and lower canine on the left side, the 4th premolar on the left and the 4th premolar on the right. This dog requires veterinary attention.

** Male Maltese #32 was found with excessive build-up of brown material on its teeth. Nearly every tooth in this dog's mouth has this build-up but it is especially heavy on the upper and lower molars on both sides. This dog also requires veterinary attention.

Failure to provide adequate veterinary care to animals with signs consistent with dental disease can lead to pain and suffering in the animals and does not ensure appropriate care to the animals in this facility.

Correct this by contacting a licensed veterinarian to have these animals examined. Licensee must follow all recommended treatment and maintain documentation of treatment for future review by APHIS officials.

Correct by: March 12, 2014

2.40 (b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS)

*** Two dogs were found in need of veterinary care during this inspection. Although the licensee was aware of the condition of one of the dogs, the second dog was found without his knowledge of the condition. The licensee must ensure that all animals are observed daily to ensure that medical problems can be discovered and appropriate care given in a reasonable amount of time. Failure to observe animals daily and give needed care can result in animals suffering.

Correct from this day forward.

Prepared By:	RANDALL COLEMAN, A C I

Title:			Date: 11 March 2014

Inspection Report

3.4 (a)

OUTDOOR HOUSING FACILITIES

*** This facility is housing short haired dogs outdoors. In addition, there is no statement from the attending veterinarian approving this housing for these dogs that may not be acclimated to being housed outdoors in cold climates. This statement must be obtained by the attending veterinarian to ensure that the status of these dogs is known by the attending veterinarian and that he/she approves of such housing. This is required to ensure the health and well being of these dogs.

Correct by: 01 APR 2014

3.4 (b)

OUTDOOR HOUSING FACILITIES

*** Six adult dogs are being housed in an outdoor facility. These dogs are pair housed and have only a carpet in their shelters as bedding. Temperature during this inspection was 33 degrees F. One shelter box had the carpet lying outside on the coated metal wire floor. These dogs require additional bedding to ensure they can remain warm. Inability to maintain body temperature can lead to illness in the dogs. Although they are pair housed, which will allow them to lie together, additional bedding is required. Correct this by providing additional bedding to these dogs.

Correct by: 05 MAR 2014

***Inspection conducted with facility representative, exit interview conducted with the licensee. Licensee agreed to have report sent by certified mail.

Type: ROUTINE INSPECTION
Date: Jul-01-2014

2.40 (b) (2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A tri-colored female Beagle without ID was found with excessively long toenails that require trimming. These nails are excessive long can interfere with the dogs ability to walk normally. In addition, these long nails are a potential injury hazard should they get caught in the flooring the dog is housed on. Correct this by trimming this dog's nails and maintaining all dogs' nails in the kennel.

THIS IS A REPEAT NON-COMPLIANT ITEM THAT REMAINS UNCORRECTED

2.50 (a) (1)

TIME AND METHOD OF IDENTIFICATION.

***One adult female tri-colored Beagle was found in the kennel without identification. This dog was also noted to have excessively long toenails that require trimming. Failure to properly identify animals makes animal tracking difficult to impossible and impedes the inspection process. Correct this by ensure all dogs are properly identified.

Correct from this day forward

3.1 (a)

HOUSING FACILITIES, GENERAL.

***Most of the plastic shelters being used for the dogs housed in the outdoor facility are chewed and worn on the edges and at the entryways. These shelters are not in good repair and require maintenance or replacement. Chewed and worn shelters can eventually affect the structural strength of the shelters which can become an injury hazard to the dogs. Correct this by repairing or replacing these shelters.

Title:

Inspection Report

3.1 (b)

HOUSING FACILITIES, GENERAL.

** The drainage system for the outside washdowns of the sheltered kennel and the outdoor kennel is not functioning properly. This drainage system is comprised of half circle pieces of pipe that collect the runoff to an open drain. There is excessive splash over of this runoff lying on the ground next to the pipes and areas where the washdowns do not connect to the pipes properly allowing the runoff to fall to the ground. This area has an excessive odor and is a breeding ground for pests. The licensee must repair this drainage system to ensure it is functional and carries the waste and runoff to the drain without allowing it to spill onto the ground and become a disease hazard.

Correct by: 01 August 2014

3.9 (b)

FEEDING.

*** Many of the self-feeders being used at this facility are worn and chewed. These feeders require repair or replacement to ensure they can be cleaned and sanitized. Excessively chewed cannot be properly cleaned and sanitized as required and can lead to food contamination. One self-feeder was found in the first outdoor enclosure housing an adult female and 6 puppies with caked feed in the bottom. This feed is not safe for the dogs to eat and the feeding of caked feed can lead to health problems or digestive upset. All feeders must be kept in good repair and maintained clean and sanitary.

Correct by: 01 AUG 2014 for replacement of chewed feeders, 04 JULY 2014 for cleaning feeder with caked feed.

**Inspection conducted with the licensee's wife. Exit interview conducted by phone with the licensee.

DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

During the inspection it was identified that the veterinarian conducted the annual physical exam for the animals on 8 May 2015. During the veterinarians exam 33 dogs were identified as having dental disease. During the exams 23 dogs were identified as having a grade 4 dental disease and 10 dogs were identified as having a grade 3 dental disease.

The following dogs were identified by the veterinarian as having grade 3 dental disease:

- 1) Yorkshire Terrier, Female, USDA tag # 263
- 2) Yorkshire Terrier, Female, USDA tag # 282
- 3) Lhasa apso, Female, USDA tag # 330
- 4) Lhasa apso, Female, USDA tag # 289
- 5) Lhasa apso, Female, USDA tag # 269
- 6) Lhasa apso, Female, USDA tag # 310
- 7) Lhasa apso, Female, USDA tag # 312
- 8) Cavalier, Female, USDA tag # 302
- 9) Shih Tzu, Female, USDA tag # 262
- 10) Schnauzer poodle cross, Male, USDA tag # 197

The following dogs were identified by the veterinarian as having grade 4 dental disease:

- 1) Yorkshire Terrier, Female, USDA tag # 281
- 2) Yorkshire Terrier, Male, USDA tag # 254
- 3) Yorkshire Terrier, Male, USDA tag # 278
- 4) Yorkshire Terrier, Female, USDA tag # 280
- 5) Lhasa apso, Female, USDA tag # 169
- 6) Lhasa apso, Male, USDA tag # 290
- 7) Lhasa apso, Female, USDA tag # 273
- 8) Lhasa apso, Female, USDA tag # 313
- 9) Lhasa apso, Female, USDA tag # 314
- 10) Lhasa apso, Female, USDA tag # 234
- 11) Bichon, Female, USDA tag # 203
- 12) Bichon, Female, USDA tag # 179

- 23) Shih Tzu, Female, USDA tag # 286

The current program of veterinary care provides clear instruction that any non-pregnant or nursing dog identified with a grade 3 or 4 dental disease shall have its teeth examined and cleaned by a licensed veterinarian. On 11 July 2015 the licensee indicated that he had cleaned all the animals teeth himself and that as of the start of the inspection had not had a licensed veterinarian clean the identified dogs.

The current program of veterinary care provided by the facility indicates that the dogs will have access to an outside pen three days a week for a half an hour. At the time of the inspection the facility no longer had an outside pen. The licensee currently houses the animals to ensure that all individually housed dogs are provided at least two times their required floor space or that compatibly housed groups are provided at least 100 percent of the required space for each dog. The licensees must follow an appropriate plan set forth by the attending veterinarian within the program of veterinary care to provide the dogs with an opportunity for exercise.

The Licensee shall assure that the attending veterinarian has appropriate authority to ensure the provision of adequate veterinary care.

Licensee must contact the veterinarian to set up and determine an appropriate timeframe for an examination. Documentation of the examination, diagnosis and treatment must be maintained and made available for inspection.

Correct by close of business on 14 November 2015.

2.40 (b) (2)

DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***The following animals noted to have signs of **severe dental disease** during the inspection (USDA tags 281, 254, 169, 290, 275, 179, 330, 302, 255, 180, 273, 313, 272, 314, 230, 242, 299, 310, 315, 316, 280, 282, 278, 262, 234). The signs noted indicating the severe dental disease were a combination several of the following 1) a heavy buildup of tan material adhered to his canine teeth, pre-molars and molars 2) gums reddened and have receded back from the tooth roots 3) a grey to green substance has accumulated along the gum line 4) a white to yellow discharge from the gum line 5) loose and/or missing teeth.

Title:

Inspection Report

*** The following animals noted to have signs of moderate dental disease during the inspection (USDA tags 203, 263, 289, 286, 197, 312, 207). The signs noted indicating the moderate dental disease were the presence of one or combination several of the following 1) moderate buildup of tan material adhered to the canine teeth, pre-molars and molars 2) gums slightly reddened and inflamed.

***The following animals are noted to be confirmed bred or are currently nursing a litter of puppies (USDA tags 314, 230, 234,299,260). Per the program of veterinary care pregnant or nursing animals will be able to be seen for dental cleaning one week after the weaning of puppies. In the time before weaning these animals should be offered palliative care such as antibiotics and/or soft foods to relieve any discomfort caused by dental disease and to ensure proper nutrition.

These animals were identified by the veterinarian on 8 May2015 as having grade 3 or 4 dental disease, as defined by the program of veterinary care. The licensee did not follow the instruction provided in the program of veterinary care indicating that the animal should have received care by a licensed veterinarian. The licensee indicated that he cleaned each of these animals on 11 July 2015. The program of veterinary care as well as instructions from the attending veterinarian should be followed to ensure adequate care for the animals. Untreated dental disease may lead to problems consuming food as well as several conditions, such as cardiac disease, that affect the health and well-being of the animal.

Appropriate methods to prevent, control, diagnose, and treat diseases and injuries must be utilized. These dogs must be examined by a licensed veterinarian. Documentation of assessment, treatment, and plan for each dog shall be maintained for examination by APHIS officials.

Correct by having this animal examined by a licensed veterinarian per the program of veterinary care, by close of business on 14 November 2015.

3.6 (a) (2) (ix)

PRIMARY ENCLOSURES.

The floors, walls and doors on the outside portion of the primary enclosures were moderately worn. The primary enclosures in this area are constructed of primarily of coated wire. The wire coating has been worn or chewed off over portions of the floors, walls and doors. In the majority of these areas the exposed wire is rusted. These areas of the kennel are no longer in good repair. The areas where the coating is damaged provide crevices that organic material can become entrapped preventing adequate cleaning and sanitization. Additionally, the rust which has formed over the exposed wires also prevents them from being readily cleaned and sanitized. Correct by repairing or replacing these damaged areas. All surfaces in contact with the dogs must be readily cleaned and sanitized in accordance with Sec. 3.11 (b) of this subpart, or be replaceable when worn or soiled.

Correct by: 13 December 2015.

Inspection Report

3.11 (a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

During the inspection it was noted that the wash-down areas had a heavy buildup of tan matter. There was a moderate amount of feces and urine present within the wash down area. This buildup is an indicator of dried urine and feces that has built up over time. Improper cleaning and sanitization of the wash down contributes to the odor and disease hazards within the facility. This facility must establish and maintain a routine for proper cleaning and sanitization for the facility to include all wash downs.

Correct by 27 November 2015.

The inspection on 11/12/2015 was conducted by the Licensee and Veterinary Medical Officer Michael Neafsey.

The inspection and exit interview on 11/13/2015 was conducted with the Licensee, Animal Care Inspector Shannon Sebera and Veterinary Medical Officer Michael Neafsey.

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** A male Great Dane (#48) had a bright red area at the base of the toenail on the right front paw. The outer middle toe on the right front paw had a bright red area on the toenail next to the toe. Although this dog was not showing any signs of lameness, there was some redness on the skin of the same toe as the bad toenail. The licensee was not aware of this dog's problem until it was pointed out by the inspector. The condition of this dog could indicate an injury, illness or other veterinary medical condition which may be uncomfortable. The licensee must consult a licensed veterinarian in order to ensure that an accurate diagnosis is made and that an appropriate treatment plan is developed and followed. The licensee must document this information and make it available to the inspector upon request. The licensee must ensure that all animals receive adequate veterinary care at all times.

To be corrected by: December 12, 2015

Inspection and exit interview were conducted with the licensee and Chad Proctor ACI.

3.2 (d)

INDOOR HOUSING FACILITIES.

This facility has a small extra building adjacent to the main housing area that is used for housing dog when the main building is full. During the inspection the extra building housed two adult Shih Tzu s. The walls and ceiling of this building are constructed of materials not impervious to moisture. Areas that are not impervious to moisture may collect dirt and debris and the prolonged presence of moisture may support the growth of pathogens.

The floors and walls of indoor housing facilities, and any other surfaces in contact with the animals must be impervious to moisture. The ceilings of indoor housing must be impervious to moisture or be replaceable.

Correct by December 7, 2015.

3.4

OUTDOOR HOUSING FACILITIES.

This facility has an outdoor area that is used for exercise. This area does not have a shelter structure for the animals to get into during inclement weather. Without a shelter structure these dogs would not have a place to seek shelter from the wind, rain or snow. The Licensee must ensure that all animals have access to a shelter structure while the animals are housed in this area or the area is being used for exercise purposes.

the dog and her puppies and to keep the enclosure in good repair.

*** There are white plastic dividers between several of the wire mesh enclosures. These dividers are secured at the top of the mesh but not the bottom and are bowing out. The divider needs to be secured at the top and bottom points to keep it secure and for the safety of the dogs.

Correct by: April 17, 2014

3.6 (a) (2) (x) REPEAT

PRIMARY ENCLOSURES.

*** An enclosure housing a pug #277 with the deformed foot has a 1.5 X 1.5 wire mesh floor. This mesh is too wide for the dogs' feet and is allowing her feet to pass through the openings in the floor. She needs to be moved to a 1X1 mesh enclosure so her feet do not fall through. (this was done at the time of the inspection)

*** Several of the puppies in the whelping room are on carpets that are on a 1x1 wire mesh floor. When the puppies come off the carpet, their feet fall through the openings. The whelping room needs to be reassessed to determine the best housing situation for the puppies to assure they are not on wire mesh to early that would allow their feet to fall through.

3.8 (a)

EXERCISE FOR DOGS.

*** A female dog that was 46 inches in length was housed in a 5x5ft enclosure. This gives the dog 25 square feet of space which meets the primary enclosure amount, but does not meet the 2x space required to meet the exercise requirement (40.5 sq feet). The current exercise plan lists the dogs as being housed in enclosures that meet this requirement or get time in an outside run. The option of being outside is only occurring when the weather is nice. This needs to be addressed and large breed dogs at the facility need to be housed in enclosures that meet this requirement or have ample time in an exercise run to meet the conditions of the exercise plan.

Correct by: April 25, 2014

Inspection Report

3.11 (a) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** There was a strong ammonia odor in the whelping room during the inspection. There was an accumulation of feces underneath the enclosures that needs to be cleaned more frequently to prevent this odor build up.

*** There was an accumulation of feces in several shelter boxes that needs to be cleaned daily to prevent the dogs from being soiled while in the box.

*** Several of the outside runs had feces that were not falling through the wire mesh. These enclosures need to be spot cleaned daily to prevent this build up from occurring and for the health of the dogs.

3.11 (d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** In the sheltered building with attached outside runs, there were mouse droppings along the ledges and tops of the boxes. A more effective method for controlling pests needs to be maintained and this includes cleaning excess droppings from the building in a timely manner to reduce disease hazards.

Correct by: Jan 19, 2015

An exit briefing was conducted with the licensee at the time of the inspection.

Date: Dec-15-2015

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** There were **expired medications** found in the drug cabinet and refrigerator. One bottles of Clavamox with an expiration date of 6/2015, injectable Oxytocin expired Oct/2015, injectable Xylazine expired 6/2014, injectable Lidocaine expired 4/2010, and a bottle of Probiotics expired 9/2015. There was also multiple unlabeled bottles and jars without a description of the name of the medication, dosage instruction and expiration dates. The drugs are being stored in an area with other miscellaneous items and clutter, and there was a deep layer of dust build-up observed. Use of expired medications is not considered proper veterinary care and can cause harm to the dogs. In addition, all medications must be stored in an area which is kept clean and tidy.

***Two dogs, Dixie and BR, were observed with a **moderate build-up of dental tartar**. Dixie also was observed to have a pea sized pink red area on top of the right front paw. The dogs had not received veterinary treatment for these conditions. Timely treatment of veterinary care issues is required in order to prevent unnecessary discomfort and stress to the animals. Dental disease can cause pain and discomfort and can negatively affect the overall health of the animal. Any dogs with health issues must be treated in a timely manner.

Correct by: Dec 29, 2015

3.11 (d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

***There were **rodent droppings** identified in multiple areas in the kennel building. The licensee has implemented a pest control program including bait stations and multiple traps, and is also in the process of renovating multiple walls to add additional wall structures and glass board in an effort to prevent rodents from entering the building. Despite these efforts there is, however, rodent droppings are still

2.75 (a) (2)

RECORDS: DEALERS AND EXHIBITORS.

Each dealer shall use Record of Acquisition and Dogs and Cats on Hand (APHIS Form 7005) and Record of Disposition of Dogs and Cats (APHIS Form 7006) to make, keep, and maintain the information required by paragraph (a)(1) of this section. Provided, that if a dealer or exhibitor who uses a computerized recordkeeping system believes that APHIS Form 7005 and APHIS Form 7006 are unsuitable for him or her to make, keep, and maintain the information required by paragraph (a)(1) of this section, the dealer or exhibitor may request a variance from the requirement to use APHIS Form 7005 and APHIS Form 7006.

*** The facility recently put their records of animals on hand on an excel type spread sheet with the applicable information. Per this section the licensee must request a variance to use computerized records rather than the 7005 forms. This needs to be addressed to assure records are being accurately maintained.

Correct by: Nov 29, 2013

3.1 (a)

HOUSING FACILITIES, GENERAL.

Housing facilities for dogs must be designed and constructed so that they are structurally sound. They must be kept in good repair, and they must protect the animals from injury, contain the animals securely, and restrict other animals from entering.

*** Some of the base boards underneath the wire mesh enclosures in the puppy room need to be repaired. The base boards are wrapped with painted metal to protect the wood. Several sections have the metal peeling and flaking off exposing wood underneath. These areas need to be addressed to keep the kennel in good repair.

3.11 (b) (2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Used primary enclosures and food and water receptacles for dogs and cats must be sanitized at least once every 2 weeks using one of the methods prescribed in paragraph (b)(3) of this section, and more often if necessary to prevent an accumulation of dirt, debris, food waste, excreta, and other disease hazards.

*** Many of the feeders had a layer of grime and debris underneath the lip of the feeder and a layer of dust on top of the feeders. These feeders need to be cleaned more often to prevent this buildup of dust, debris and grime for the health of the dogs.

Correct by: Nov 14, 2013

3.11 (c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Premises where housing facilities are located, including buildings and surrounding grounds, must be kept clean and in good repair to protect the animals from injury, to facilitate the husbandry practices required in this subpart, and to reduce or eliminate breeding and living areas for rodents and other pests and vermin.

*** General cleaning needs to be addressed in the kennels. There were dust and dead flies on the window ledges, an accumulation of hair and debris on the top of several enclosures and through the mesh of others. The fans hanging from the ceiling were dirty with a layer of dust. These areas need to be cleaned on a routine basis to reduce this amount of dust and debris.

*** The facility gives the dogs various items to "play" with in their enclosures. One of the items was what appeared to be a bar-b-que bottle. There was evidence of some of the sauce in the bottle as well as mold growing in the bottle. Mold can be a hazard to the dogs and when such items are given as enrichment they should be removed in a timely manner or cleaned prior to use to reduce mold growth.

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The 2 year old, male, Pomeranian dog with micro chip number 941000016475157 is having difficulty standing and walking. When assisted to stand, this dog is reluctant to support itself and is having balance issues. When walking, the dog has an abnormal gait, including circling and wobbling. There appears to be a neurologic problem that is affecting the hind limbs more than the forelimbs. The dog appears to be of normal weight and hydration status. If left untreated, this neurological problem can become more severe and might prevent the dog from eating and drinking. This dog must be examined by a veterinarian. Documentation of the diagnosis and treatment must be available for review by APHIS officials.

Correct by: 27 August 2014

2.40 (b) (3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

At the time of inspection, a 2 year old, male, Pomeranian dog was observed to have difficulty standing and walking. There was no documentation that this issue was observed prior to inspection. Daily observation of all animals is necessary to recognize early signs of disease, injury, or illness. All dogs must be observed adequately to assess their health and well-being.

2.40 (b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS)

*** Male poodle #5 was found in need of grooming. This dog is matted over most of its body and requires clipping. In addition, both ears have brown debris built up in them. This dog was examined by the attending veterinarian on 10/25/13 and was found to have a mild ear infection with lots of debris in the ears. This dog requires additional care and grooming to ensure its well being.

***Female poodle #3 is also matted and requires grooming. This dog has brown debris in both ears and was examined on 10/25/13 by the attending veterinarian. The attending vet found this dog to have a chronic ear infection in both ears. Also, this dog has a soft swollen area on the left front foot. The skin in this area is mildly red. The dog is walking on the leg without any noticeable limp.

These dogs must be seen by the attending veterinarian for examination, diagnosis, and proper treatment. Documentation of the diagnoses, recommended treatments, and treatment of the dogs must be maintained. Failure to provide appropriate ongoing care can result in pain and suffering in the animals.

Correct by: 1/27/14

3.6 (a)(2)(i)

PRIMARY ENCLOSURES.

*** Several doggy door thresholds have been chewed or are loose leaving sharp edges protruding into the enclosures and are now a potential injury risk to the dogs. These thresholds are made of stainless steel and the corners that have been pulled or fallen loose are sharp and a potential hazard to the dogs. These areas must be replaced or repaired to ensure the dogs are safe and the potential hazard eliminated. Correct by repairing or replacing these areas.

Inspection Report

2.75 (a) (1)

RECORDS: DEALERS AND EXHIBITORS.

***No current records of animals in hand were available during this inspection. The licensee's daughter stated that they currently do not have an up to date Form 7005 for adults. A computer record from 2011 was found but has 62 dogs listed when only 35 adults were counted on today's inspection. The licensee must ensure that all dogs are kept on Form 7005's and are kept current. This is required to assist the inspection process and ensure animal tracking is possible, which is especially important in the event of a disease outbreak.

Correct by: 01 NOV 2014

3.1 (c) (1)

HOUSING FACILITIES, GENERAL.

*** Most of the enclosure doors on the inside runs for the sheltered kennel on the near side of the road are rusty. These doors require repair, replacement, or resurfacing to ensure that they remain structurally sound and can be properly sanitized. The licensee must ensure that all enclosure doors are kept in good repair and free from rust to allow them to be properly sanitized and structurally strong.

Correct by: 01 NOV 2014

3.1 (c) (3)

HOUSING FACILITIES, GENERAL.

*** There are at least three dog access doors that have a buildup of brownish grime. Surfaces in contact with the dogs that have dirt and grime can harbor disease hazards. The licensee must ensure that all surfaces in contact with the dogs are kept clean and sanitized at least once every two weeks using the methods in accordance with 3.11 (b) of this subpart to reduce disease hazards.

Correct by: 01 NOV 2014

3.9 (b)

FEEDING.

*** In both the kennel on the near side and the kennel on the far side of the road, there are several self-feeders that have a buildup of food particles on the inside, and are dirty and grimy on the outside and the edges. There are also several that are chewed up and scratched. Feeders that are chewed and or scratched are not able to be cleaned and sanitized properly, and feeders that are dirty with grime can harbor disease hazards. The licensee must ensure that all feeders are maintained or replaced, and must be sanitized at least every two weeks using the methods in accordance with 3.11 (b) of this subpart to reduce disease hazards.

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***A four year old, female, Cavalier King Charles Spaniel with USDA tag number 002 has an open wound in-between the 3rd and 4th digit of her left front paw. The wound is round, raised, and has a clear discharge associated with it. The dog appears to be walking normally. If left untreated, foot issues can lead to further problems, such as infection or lameness. Failure to use appropriate methods to prevent, control, diagnose and treat diseases and injuries can affect the health and well-being of the dogs. This dog must be examined by a licensed veterinarian or treated by the foot abscess instructions in the program of veterinary care approved by the attending veterinarian. Documentation of this treatment must be available for review by APHIS officials.

***The five year old, female, Shih Tzu with USDA tag number 039 has a white discharge in and around both eyes. There is small white spot located centrally on the surface of the right eye and an approximately 2 mm round, crater-like lesion located centrally on the surface of the left eye. There is discharge associated with both eyes and the fur near the medial aspect of both eyes is moist and matted. The dog is not squinting either eye. Eye conditions can be uncomfortable for the dog and can lead to permanent eye damage if not treated properly. This dog must be examined by a licensed veterinarian. Documentation of the examination, diagnosis, and treatment must be maintained by the licensee and made available to APHIS officials for review.

Correct by: 12 July 2014

2.40 (b) (3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

At the time of inspection, a five year old, female, Shih Tzu was observed to have discharge and matting of her fur around both eyes. The licensee failed to observe this discharge and associated eye lesions. Daily observation of all animals is necessary to recognize early signs of disease, injury, or illness. All dogs must be observed adequately to assess their health and well-being.

3.3 (d)

SHELTERED HOUSING FACILITIES.

There is one enclosure currently housing 3 large breed dogs on the hill side of the kennel. The interior part of the enclosure does not allow each dog to sit, stand, lie down and turn around freely when all three dogs are in this area at the same time. Adequate floor space is required to ensure the each dog has enough room to move around freely. Licensee must ensure that all dogs within an enclosure has enough room to sit, stand, lie down and move around freely at all times and within all areas of their enclosure.

Correct By: 5/20/2013

3.6 (a) (2) (x)

PRIMARY ENCLOSURES.

There was one litter of pups housed in an enclosure without a solid area on the floor. The pups were noticed having trouble walking on the floor of the enclosure. Their legs were noticed falling through the bottom several times as they were moving around. Allowing the puppies legs to fall through the bottom of the enclosure expose the pups to potential injury. Licensee must construct all enclosures in a manner that does not allow the dogs/puppies legs to go through the bottom.

Correct By: 5/16/2014

3.8 (a)

EXERCISE FOR DOGS.

There are three large breed dogs housed in separate enclosures on the road side of the kennel. These dogs are housed individual and are not housed in an enclosure that allows them two times the required floor space for exercise. In addition, they do not have an exercise plan, in writing, for dogs that are singly housed without two times their required floor space. Exercise is pertinent to the growth and development of the animals. Licensee must provide all animals within the facility to have regular exercise. This plan must be addressed and approved by the attending veterinarian.

2.40 (b)(2) DIRECT NCI REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS)

Direct The collar on tan and white female Shih Tzu with USDA tag #152 is very tight. With an attempt to remove the collar, it was found that several of the chain links were imbedded into the dog's neck such that they could not be removed. Skin has grown over and through the links of the chain collar on the underside of her neck. Scabs and dried blood are present.

Direct Black and white female Boston Terrier with USDA tag #153 has thick green discharge in and around both eyes. Some of the discharge has dried and is adhered to the skin and hair around her eyes. Her eyes appear hazy. Blood vessels are visible in both corneas. An opacity is visible in each eye, with the one in the left eye larger than the one in the right.

Black and tan male Yorkie with USDA tag #158 has dark material adhered to his teeth. The gums have receded back from the teeth and a grey green fluid has accumulated in some of these pockels. The gums appear swollen and red, especially on the left side.

The collar on the black and white female Boston Terrier with USDA tag #168 is very tight. There is an approximately nickel sized area of hair loss on the throat that is red and scabbed. The chain was removed at the time of inspection.

Adequate veterinary care has not been provided. Appropriate methods to prevent, control, diagnose, and treat diseases and injuries must be utilized. These dogs must be examined by a licensed veterinarian for diagnosis and treatment. Documentation of the veterinarian's assessment, treatment, and plan shall be kept for examination by APHIS officials.

Seven dead puppies are on the ground on the northern side of the sheltered housing facility. These animals are spread in an area approximately 10 feet in diameter and approximately 20 feet from the kennel. At the time of death, one animal appears to have been several weeks old and the others appear to have been newly born. These animals appear to be well preserved. Dead animals can attract insects, pests, and vermin, as well as cause odors and increase disease hazards. There must be regular and frequent collection, removal, and disposal of dead animals to minimize contamination and disease risks.

The 2 year old, male, Yorkshire Terrier dog with USDA number 136 has an accumulation of hard, greyish/brown material on the upper incisors and cheek teeth on both sides of the mouth. The gums associated with these teeth are dark red and inflamed. Licensee must use appropriate methods to prevent, control, diagnose, and treat diseases and injuries to ensure the health and well-being of the dogs. This dog must be examined by a licensed veterinarian. Documentation of the examination, diagnosis, and treatment must be maintained by the Licensee and made available to APHIS officials.

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS)

(a) Each dealer or exhibitor shall have an attending veterinarian who shall provide adequate veterinary care to its animals in compliance with this section. (1) Each dealer and exhibitor shall employ an attending veterinarian under formal arrangements. In the case of a part-time attending veterinarian or consultant arrangements, the formal arrangements shall include a written program of veterinary care and regularly scheduled visits to the premises of the dealer or exhibitor.

There is a litter of seven puppies in the kennel that have had their ears cropped. Licensee performs this procedure routinely. Guidance for the procedure is not present within the written program of veterinary care. Without current guidance on how to perform this procedure, puppies may experience undue pain and distress. Licensee must assure adequate veterinary care is provided to all kennel dogs. Up to date guidance for performing ear crops shall be obtained and included in the written program of veterinary care. Licensee must follow all veterinary guidance exactly.

3.1 (f)

HOUSING FACILITIES, GENERAL.

(f) Drainage and waste disposal

The drainage system for the first two kennel buildings runs into a settlement pond located near the buildings. The nearby sewage is a disease risk for the animals. Systems for drainage and animal waste disposal which use sump or settlement ponds must be located far enough away from the animal area of the housing facility to prevent odors, diseases, pests, and vermin infestation. The facility shall provide for regular and frequent collection, removal, and disposal of animal and food wastes, bedding, debris, garbage, water, other fluids and wastes in a manner that minimizes contamination and disease risks.

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include: (2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care.

A brown and white female English Bulldog puppy is flat and listless even though she has been treated with antibiotics for the past couple of days. She responds to stimulation and is able to walk around but appears small, thin, and is dehydrated. Her hair coat is unkempt, she wobbles, and has a thick yellow discharge from her left nostril. The puppy is in ill health.

A tan and white female English Bulldog with microchip #0A02025923 has excessive fluid accumulated around both eyes. Some of the fluid is thick, green and has accumulated on the hair around both eyes. The part of her eyes that should be white are red. Ocular discharge and redness is indicative of an eye problem.

Adequate veterinary care must be provided including the implementation of appropriate methods to prevent, control, diagnose, and treat disease and injuries. These dogs must be examined by a licensed veterinarian for diagnosis and treatment. Documentation of assessment, treatment, and plan shall be maintained for examination by APHIS officials.

problems of animal health, behavior, and well-being is conveyed to the attending veterinarian

Brown and white male English bulldog "Titus", microchip #0A02026436, has thick greenish discharge in and around his left eye. Licensee stated Titus has been examined by the attending veterinarian previously and requires periodic treatment for this condition.

White and brown female English bulldog "Lady", microchip #0A01397367, has a lesion on her right front foot. The area is red, moist, and sensitive to touch.

Brown and white female English bulldog with microchip #0A01517368 has red discoloration around her left eye and in the skin fold under the eye. The skin in both areas is moist and red.

Adequate veterinary care has not been provided. All animals must be observed daily to assess their health and well being. Appropriate treatment must be provided in a timely manner. The above listed dogs must have their health problems adequately addressed. Licensee shall maintain documentation of the dogs' treatment for examination by APHIS officials.
